

## REPORT ON SDG 13: CLIMATE ACTION

Azerbaijan University recognizes the urgency of climate action and is actively working to integrate climate change awareness and sustainability into its academic programs and campus operations. The university encourages students and faculty to engage in research that addresses climate change, focusing on solutions for mitigation, adaptation, and environmental conservation.

## Climate action (SDG 13)

Azerbaijan University is deeply committed to addressing climate change and promoting environmental sustainability as part of its support for Sustainable Development Goal 13: **Climate Action**. Recognizing the importance of education in tackling global environmental challenges, the university regularly organizes seminars, workshops, and awareness campaigns to educate students about climate change, its impacts, and the actions needed to mitigate it.

One of the university's key initiatives includes tree planting activities, where both students and staff participate in creating greener spaces on and around the campus. These efforts not only contribute to carbon reduction but also foster a culture of environmental responsibility within the university community.

Azerbaijan University also integrates sustainability topics into its curriculum and extracurricular programs, encouraging students to think critically about ecological issues and empowering them to become active contributors to a more sustainable future. By combining education, community engagement, and practical environmental action, the university demonstrates its strong commitment to climate action and environmental stewardship.
